

## Solar Panel Conference Feedback

Here is a short summary of the feedback we have gratefully received from people who attended the Solar Panel Conference.

We received feedback from 27% of the people who attended. We registered 108 participants out with the speakers, organisers and help received from Partick South Church.

90% of respondents thought the conference was Excellent/Good.

48% specifically mentioned the opening sessions as the most interesting of which the Selkirk Case Study was the most popular. No workshop stood out as better than others, however 10 people mentioned specific sessions to be the most useful to them. Q&A sessions were also positively highlighted.

There were 20 specific positive comments. 62% mentioned problems with two workshops held in one area and lack of space.

Respondents said they had heard about the conference through the Church of Scotland / Eco-Congregation Scotland information or through their local church. Two people mentioned specifically that they heard it through the email grapevine.

Lessons for next time: Better division of workshops to avoid noise problems

We would like to thank everyone for making the conference a successful and well-attended event!

Best wishes, Oyunn Anshus
